Abstract (en)

[origin: EP1026103A1] The device has a connecting channel(14) on the axially movable tube section(5) in the spray head housing and which by movement of the tube section relative to the spray head is selectively connected to only one feed channel(13) or simultaneously to both feed channels(12,13) so as to supply one(11) or both(10,11) nozzles. The connecting channel is an annular cut-out in the outer region(16) of the tube section, and its extent in the operating direction is greater than or the same as the spacing of the feed channels.
