Abstract (en)
[origin: EP1026269A1] A high-melting superalloy made of iridium or rhodium or both thereof as a base and containing at least nickel together with at least one a metal selected from the metal group consisting of titanium, zirconium, hafnium, vanadium, niobium, and tantalum, wherein at least both phases of an fcc phase and an Li₂ phase are formed in the texture, and an amount of the Li₂ phase from 20 to 80% by volume. <IMAGE>
