Abstract (en)

[origin: EP1026298A2] A weaving loom (1) with shuttles (8) having an improved transport system, whose particularity consists of the fact that it comprises at least one shuttle (8) which is suitable to perform a translatory motion through the warp threads of the loom, the at least one shuttle being actuated with a propelling movement by motorized means (9) which allow to propel the shuttle (8) from one end of the loom to the other, in order to successively accommodate the shuttle from a drop box (6) located at one end of the loom to a drop box (6) located at the opposite end.
