Abstract (en)

From a machine actuation mechanism to a mechanism for moving a sliding plate (2) a Bowden control cable (3) is carried, whose conduit (32) leans against a supporting attachment (11) of a mounting plate (1), a wire (31) of the Bowden control cable (3) being fastened to a pushing plate (4). The pushing plate (4) is guided by the mounting plate (1) and, in a pushing way, leans against a first arm of a bent lever (5), a second arm whereof, in a pushing way, leans against a supporting attachment (21) of the sliding blocking plate (2), which, when pulled by the Bowden control cable (3), disengages the door handle of the appliance. <IMAGE>
