Abstract (en)
[origin: EP1026349A1] Handle has support (14) fixed on internal side of door bodywork panel (12). Support has fasteners (36) for fixing handle support on panel by approaching perpendicular to panel front inside to outside. During this movement, fasteners are engaged through panel opening (22,28) and by hooking movement parallel to panel. During hooking of fastener, its end comes opposite external face of panel preventing any transverse withdrawal of fastener and support to inside.
