Abstract (en)
[origin: EP1026359A1] Shutter casing has under face with slot through where shutter winds into casing. Final slat (15) is fixed to sealing device (16) and takes shape of running section (17,17A) engaging with slot edges when shutter is reassembled. Two sections have flanges (20,20A) perpendicular to median plane of final slat and fastening shoulders (32) engaging complementary shoulders (33) equipping final slat. Sections are completed by locking means (34) in combination with fastening shoulders defining fixing means.
