Abstract (en)

[origin: EP1026470A2] For a pipe and heat exchanger high pressure cleaning device, the support device has a support part (12) by means of which a nozzle, sound or similar can be supported when introduced into a pipe or heat exchanger. A positioning device (3,10) enables the support part to be placed in various positions at the pipe or heat exchanger level. A holding device (1,15) fixes the support device on the pipe or heat exchanger. The positioning device has first and second telescopic arms, of which the first at one end is telescopically located and fixed on the holding device. The second arm is adjustable and is connected with the one end of the second telescopic arm, which holds at its other end the support part.
