Abstract (en)

[origin: US6338186B1] The invention relates to a device for retaining and/or blocking shoelaces, for sport shoes in particular. The device is in the shape of a tube portion (10), with two parts (11, 12) articulated about a hinge (13), that can be locked in the closed position and unlocked to allow for the insertion or removal of the shoelace in the shape of a bundle. The device is fastened by at least one fastening means to a part integral with the shoe, for instance to a shoelace passing through at least two holes (15, 16, 17, 18) formed in at least one (12) of the two parts of the tube.
