Abstract (en)
[origin: WO9918821A1] A rack (7) for use as a rack for periodicals and the like can, according to the invention, comprise three rectangular plate elements, i.e. a first plate element (1) with a single cut-out (2), a second element (3) with two cut-outs (2), and a third element (4) similarly with two cut-outs (2) but with double plate length. By means of these three elements (1, 3 and 4), it is possible to set up a rack (7) which is assembled solely by mutual sliding engagement of the cut-outs (2) in the plates to form a right-angled assembly which is totally concealed. With this assembly, the plate edges form a projection, a stop-edge (6), on which the periodicals and brochures and the like can rest when they are placed on the rack's inclined plate element.
