Abstract (en)

[origin: WO9923621A1] The invention relates to a dispenser for personal-care products, in particular perfume, toilet water, creams and soaps or the like, comprising at least one container for the care products, at least one tube and at least one spray element which, via the tube is feedingly in communication with said container as well as an externally operable dispensing apparatus which is coupled with the minimally one container and controls the dispensing therefrom of a predetermined selectable quantity of the care product for external distribution via the minimally one spray element. The minimally one container is provided with a press button which is known as such and which, when pressed, allows the care product to escape from the container via an opening in the press button, and the dispenser comprises at least one case which is suitable to detachably accommodate the press button, and which case is provided with an opening for the tube to pass through.
