Abstract (en)

[origin: EP1028072A1] The container has a moveable discharge blade, compression blade (5), clearer blade (6), and power bar (11) to pivot the compression blade. The power bar is hinged to the side of the pressure blade away from the intake opening (10) of the container, and to the end of the pivoted stern section (3) in the roof area. In compression position, compression blade and clearer blade are in position parallel to, or on the level of the intake opening. The opening is covered by the blades, and the clearer blade is at an angle of approx. 180 degrees relative to the compression blade.
