Abstract (en)
[origin: EP1028257A2] The device has a cross flow ventilator (1) with ventilator roller (2), mainly positioned below the panel, board, (7) etc, on which the device is mounted, and does not project over the top edge (15) of that panel. The roller is covered by a screening box (13) with at least three independently adjustable openings (14), positioned in its longitudinal sides (25,28). The hood (8) covering the ventilation openings has a thickness similar to that of the panel.
