Abstract (en)

[origin: US6306896B1] The invention relates to a pharmaceutically active composition containing a substance which is active against malaria parasites and shows a high level of activity against multiresistant lines of *Plasmodium falciparum*. The inventive composition is characterized in that it contains the active agent artemisinin and/or a derivative of artemisinin in a carrier material which is inert with the active agent, in a pharmaceutically active quantity and in that the carrier material is essentially free of compounds with a hydrophilic-lipophilic balance between 7 and 9.9.
