Abstract (en)
[origin: WO9852826A1] An apparatus (76) for separating opposed first and second panels (12, 14) of a carton blank being conveyed through a packaging machine (10), the apparatus comprising panel separating means arranged to move around a pre-determined locus such that the panel separating means comes into contact with and engages said first panel, the apparatus being operable to change the velocity of the panel separating means relative to the carton during engagement with said first panel so as to separate said first panel from said second panel.
