Abstract (en)

[origin: DE19749643A1] The invention relates to dispersion coloring substances with a PVK > 40 % which contain a preparation as a binding agent. The preparation comprises at least one aqueous polymerizate dispersion as component A. The polymerizate P of said dispersion comprises carbonyl groups. As component B, the preparation comprises at least one compound with at least two reactive NH₂-groups opposite the carbonyl groups of the polymer of component A. The invention also relates to the application of such preparations in order to improve wet abrasion resistance.
