Abstract (en)

[origin: WO9919529A1] Coated flat rolled material for vacuum metallised materials having a metal substrate, where the substrate is covered by an organic coating consisting of at least two different layers. The first layer closest to the base material has a flexibility of at least 0T according to ECCA T7-1996, has good adhesion to the substrate and is vacuum resistant. The top layer has a micro hardness of at least 40 Kp/mm<2> measured as Vickers Hardness, is vacuum resistant and has good adhesive properties to the metallised layer.
