Abstract (en)  
[origin: DE19748864A1] A cash drawer for an automatic teller has a bottom (26) and an opening for cash withdrawal that can be closed by a closing flap (16). The cash drawer is designed as a module which can be inserted into the automatic teller and comprises a frame (10) provided with the opening for cash withdrawal, a closing flap (16) arranged thereon and movable between an open position in which the opening for cash withdrawal is cleared and a closed position in which the opening for cash withdrawal is closed, the bottom (26), a stacking device (100) for depositing bank notes on the bottom (26), a separating device (38) for drawing bank notes from the bottom (26), a first path of transport (72, 80, 90) for conveying bank notes from a first connection point of the module to the stacking device (100), a second path of transport (101, 90, 80) for conveying bank notes from a second connection point (105) of the module to the stacking device (100) and a third path of transport (56) for conveying bank notes from the separating device (38) to the first connection point (68).
