Abstract (en)
Disclosed is a cleaning apparatus having a very simple arrangement and capable of reliably removing the reaction product and the used fluid which have built up in a brush. A recessed section (2) having a size for permitting a brush to be located therein is formed to a main unit (4) having an open upper surface, and a chamber section (5) is formed so as to surround the recessed section (2). A plurality of nozzle sections (6) are formed to the main unit (4) between the chamber section (5) and the recessed section (2), whereas an introduction hole (7) communicating with the chamber section (5) and a discharge hole (3) communicating with the recessed section (2) are opened to the main unit (4), respectively. <IMAGE>
