Abstract (en)

[origin: EP1029670A1] The setting device consists of a clamping rail and stops with setting screws. They are movable in the circumferential direction of the plate cylinder and acting with an edge of the printing plate. There is an operating device (10,12) acting on all the setting screws (6) together to move the stops (5) through paths of different lengths in the circumferential direction. The setting screws may have different threads, either with the same rise but of opposite hand, or of the same hand but with different rise.
