Abstract (en)

A covering structure for circus and/or travelling indoor entertainments comprising a tent (1) supported by a rigid frame and capable of covering an area where tiers of seats (6) are located, characterized in that the covering tent (1), the tiers of seats (6), and the rigid supporting structure co-operate so as to form a closed building system that does not need any anchor means and is capable of self-supporting just by resting on the ground. The tiers of seats (6) can be bent as they are hinged to the supporting frame, which allows them to be assembled/dismantled only by a rotation movement so that their overall dimensions for the transportation are reduced. <IMAGE>
