Abstract (en)
[origin: EP1030021A2] A bracket extending at right angles to the hinge arm (4) is formed from the base plate (3) on which the arm is mounted. The bracket is anchored to the opposite side of the base plate to the arm, which is fitted between a base plate strip and the bracket. A base plate is secured to the door frame, and the hinge arm mounted on it is pivotably connected to a hinge cup (8) in the door leaf. At least one positioning and/or locking mechanism is provided for fixing the hinge arm in different positions relative to the base plate.
