Abstract (en)

[origin: EP1030130A1] The radiator has a heating panel (1), held between two uprights (3, 4) with towel rails (12) between, made from two layers of tempered glass with a multi-layer heating element sandwiched between them. The heating element incorporates a resistance circuit and has front and rear faces which are self-adhesive when cold for sticking to the inner surfaces of the glass layers. The radiator temperature is thermostatically controlled, with control knobs (14) at the top of the front surface.
