Abstract (en)  
[origin: WO923921A1] Device for carrying eating and drinking tableware, comprising a support surface (1) on which the eating and drinking tableware can be placed, the support surface being provided with a carrying arm (2) which extends from the support surface (1) to a position above the support surface (1), in the vicinity of the upwards perpendicular (5) leading from the centre of gravity (S) of the support surface (1), at which position a handle (4) is connected to the carrying arm (2) by means of a movable connection, in which device the movable connection comprises a coupling piece (3) made from an elastically deformable material, which coupling piece (3) is flexible to such an extent that movement of the handle (4) with respect to the carrying arm (2) and the support surface (1) which is connected thereto is permitted, and is torsionally rigid to such an extent that a rotation of the handle (4) about its longitudinal axis results in a rotation of the support surface (1).
