Abstract (en)

[origin: WO9924263A1] The invention relates to a method and a device for controlling a drive unit (13) which conveys a striplike laterally pre-printed recording medium (5), whereby a sensor is sensitized with respect to a regularly re-occurring mark (109) of the recording medium (5). The recording medium (5) is continuously scanned by the sensor (59) during the printing operation and the speed at which the recording medium (5) is conveyed is adjusted according to the scanned signals from the sensor.
