Abstract (en)

[origin: WO9921734A1] A device for attaching accessories in a car with an attachment device (30) that includes an accessory attachment bracket (31) and an attaching part (32, 33), by means of which the device can be attached to a car without need to make screw holes or to leave corresponding marks to the car interior. The attaching part (32) is provided with a groove or a corresponding part, which can be pressed to a free edge of the side window (35) of the car, so that the accessory attachment bracket (31) remains inside the car or the attaching part (33) is provided with a sticker element (45) that can be attached inside the car door (43) or to some other hidden place (50, 52) in the car interior, such as to the sidewall of a car radio compartment (50) or to the top surface of a glove compartment (52). The attaching part (33) may also include a plate-like part that facilitates the mounting of the attaching part inside the car by inserting the plate-like part into a sufficiently narrow gap or slit in the car interior. Preferably the attachment bracket (31) and the attaching parts (32, 33) of the attachment device (30) are made of metal plate and coated with teflon plastic.
