Abstract (en)
[origin: GB2329884A] A product control apparatus includes a conveyor for conveying products (38) along a path, and product engaging member (16) for engaging a product (38) to change the orientation of the product relative to the conveyor, wherein the member for engaging the product is operable such that a product (38) conveyed along the path may be turned independently of other products conveyed along the path. The product control apparatus may comprise two product engaging members (16,18) one on each side of the conveyor path. The first of the product engaging members 16 may include a plurality of projections (24,26) which are movable in a path parallel to the conveying path, and the second product engaging member 18 includes a movable arm. In a second embodiment the product engaging member comprises a plurality of rods which are movable transversely of the conveying path (see Figures 5-6).
