Abstract (en)

[origin: DE19754330C1] A subcaliber bullet has a nose capable of limited movement towards the barrel end to produce the final bullet shape on firing. A subcaliber bullet has a bullet body (2) accommodating a bullet nose (3) which is capable of movement, limited by an abutment (9), in the direction towards the barrel end to produce the final bullet shape on firing. Preferred Features: The bullet body consists of copper and the bullet nose consists of light metal, plastic or other lightweight material.
