Abstract (en)

[origin: FR2762106A1] The invention concerns a device for determining prayer times comprising: means for receiving remote-transmitted signals; means for automatic location of geographical position, adapted to take into account said remote-transmitted signals and to supply so-called "geographical" information representing the device geographical position; means for time determination adapted to supply so-called "time" information representing instantaneous time; means for data processing adapted to take into account the geographical and time data and to supply so-called "prayer time" information representing at least a prayer time; and prayer time data output adapted to transmit to the user a signal representing the prayer time determined by the data processing means.
