Abstract (en)

[origin: WO9927516A1] Disclosed is an ON delay device (10) for a visual display unit (14) which can be placed in an idle state by blocking at least one signal (H-SYNC IN, V-SYNC IN) controlling said visual display unit (14). The inventive ON delay device comprises inter alia one blocking device (42,44,46) which blocks said signal (H-SYNC IN, V-SYNC IN) for a predetermined delay interval. The signal is fed to the visual display unit (14) once said delay interval has elapsed.
