Abstract (en)
The invention relates to a wax applicator equipped with an air discharge, comprising a metal base plate (3) heated with an electric resistance (8). A suction channel system (7) is arranged around the base plate (3) in the wax applicator to suck wax gases and particles in connection with melting of the wax. The wax applicator is equipped with a casing (1), wherein the suction channel system (7) is formed between the base plate (3) and the lower part of the casing (1). The suction channel system (7) is arranged to encircle the base plate (3). The suction channel system (7) is also arranged higher than the base plate (3) to prevent obstructions. Furthermore, a suction is arranged inside the casing (1). <IMAGE>
