Abstract (en)
A recording sheet in which a luminous layer composed of a resin and a luminous pigment is formed on at least one of both surfaces of a substrate film and in which a recording layer which permits recording with a toner or an ink is provided on the luminous layer or on a surface opposite the luminous layer. Disclosed also is a display material having an image layer of a resolution of 200-1400 dpi provided on the luminous layer or on a surface opposite the luminous layer. As a result of the above constitution, there are provided a recording sheet or a display material which has excellent visibility and which is suitably used as an information plate or poster to be placed in the dark.
