Abstract (en)  
A non-woven fabric is described and is constituted by a textile substrate of bound fibres characterized in that it comprises at least 50% by weight of lyocell cellulose fibres. The non-woven fabric has good resistance to pressure and to dyeing in a bath at a temperature above 80 DEG C, and has an affinity for dyes similar to that of fabrics made of natural fibres. It can advantageously be used for lining garments which are dyed after the textile components have been assembled.
