Abstract (en)

[origin: EP1031692A1] The closure plate (10) is at least partly in a metal closure piece (22) and in the closed state of the closure engages a closure component (8) of a closure on the pane (1) of the window or the panel of the door. The closure plate is a molded part of plastic and the closure piece is encased with plastic on the surfaces of the closure plate visible after installation on the arch frame (2). The closure piece is produced by stamping and/or bending out of metal plate. At least one bolt opening is formed by at least one slot-shaped recess, which is open at least to the upper side of the closure plate turned away from the rabbet.
