Abstract (en)
[origin: EP1031790A1] The burner has a fuel injection tube (18,19) extending along the burner axis and an air feed (10) formed in the casing between the side openings (11). The fuel is fed from the tube via axial openings (25) in a plane adjacent to the external plane of the combustion tunnel (9) to provide a pre-dilution of the charge before burning.
