Abstract (en)

[origin: DE19732591C1] The invention relates to a kitchen appliance for locally heating the surface of food in a saucepan or serving dish. To this end, the kitchen appliance has a handle part (3) with a plate-like element (5) at one end. A heating spiral or plate (9) inside the plate-like element (5) heats up when traversed by a current. This plate-like element (5) is preferably round, so that it can be introduced into a saucepan from above. The inventive kitchen appliance is preferably used in the caramelization of food.
