Abstract (en)
[origin: WO9927881A1] A stretcher support arrangement for use in an emergency conveyance, the arrangement including: an elongated platform (20) for supporting a stretcher (40) thereon; a platform support (8) having a portion for supporting the platform in a substantially horizontal position (28) and a portion for connection to a wall of the emergency conveyance (30), the platform supporting portion (8) supporting the platform (20) such that the platform (20) is capable of pivotal movement about an axis (41) generally parallel to the longitudinal axis of the platform, the connection portion being adapted for pivotal connection (44) to the wall (30) of the emergency conveyance so that the platform support may pivot about an axis generally parallel to the longitudinal axis of the platform; and resilient means (38), and optionally damping means (47), positioned between the platform support (8) and the wall (30) of the emergency conveyance.
