Abstract (en)
[origin: WO9924014A1] A hair conditioning composition is disclosed, comprising: (a) a hydrophilically substituted cationic surfactant; (b) from about 5 % to about 20 % by weight of a high melting point compound; (c) an additional cationic surfactant; and (d) water; wherein $\beta / \alpha < 4000$, where α is the weight percent of the high melting point compound; β is viscosity (cps) of the composition at a constant shear rate 2sec⁻¹ after 1 minute, β being less than about 35000 cps.
