Abstract (en)

[origin: EP1033082A1] A suction -conveyor (1) for the length of tobacco operates in conjunction with a suction chamber (8). The conveyor, at the entry part of a formatting appliance (2) molding the length of tobacco into a length of rolled cigarettes, is guided round a compression disc (19) turning with the suction-conveyor. The compression disc, where the section of the periphery is free of wrapping, is defined by an air-duct (26) connected with the inner storage space (27) of the compression disc, and with the suction chamber.
