Abstract (en)

[origin: EP1033206A2] The system to tense a coil spring and align the spring plate has a positive fit unit (16,17) at the first grip section (1), for the angular orientation of the upper spring plate (4) in relation to the first grip. They are located so that when the upper spring plate is at a given angular position in relation to the first grip, they engage a part (11,12) of the spring plate in a positive fit with little play. The positive fit units have a holding groove (18,19) aligned radially to the grip, to fit over the projecting pins (14) from the upper surface (9) of the spring plate.
