Abstract (en)
Self-driven vibratory finishing machine (1) for asphaltting road surfaces (5) comprising first central compacting means (100) of the bitumen aggregate deposited, at least one pair of second compacting means (7) set along the sides of said machine (1) and supporting means (8) connected by joining means (11) to said second compacting means (7), holding flat elements (9) scraping along the surface being asphalted (5) suited to side stopping said bitumen aggregate (B) being deposited. Said joining means (11) produce a vertical rotation axis X for said supporting means (8) to take said supporting means (8) from their work position to their compact position. <IMAGE>
