Abstract (en)

[origin: EP1033451A2] A foundation structure (14) for the building unit (10) is assembled on a construction site, the unit preferably being larger than one normally transported by road. The building unit is then pre-fabricated on top of the foundation structure, which is then suspended from an aircraft so that it can be transported by air to the final building location. Independent claims are also included for (a) a building unit constructed by this method, and (b) a method for joining together two walls along their strip regions, these walls being too large to transport by road.
