Abstract (en)
[origin: EP1033461A1] The lock, especially mortise lock has a bolt (17) and a latch (6) operated by a change-over lever (16) operated by a closure element (22). The change-over lever, after its swivel movement away from the closure element and as a result of a transverse displacement of the change-over element to the bolt is disconnected from the bolt. A thrust piece (30) is formed by a protuberance (31) on the lock-cover . The bolt forms a pocket (25) into which fits a carrier (26) belonging to the change-over lever.
