Abstract (en)
[origin: DE19854666A1] A signal transmitter has a casing for electrical consumers for optical or acoustic signals. A signaling device is fitted with no screws. Electrical consumers are fitted in holders (42) with conductor facilities connecting the electrical consumers to each other but allowing them to be detached. A conductor facility component (100) has a single strip conductor (101) separated electrically from a strip conductor unit (102) with several strip conductors (103).
