Abstract (en)
Conventional paper dispensers utilize a substantially uniform spigot/paper roll interface. This can lead to incorrect loading of paper rolls and to dishonest practice by the operator. Accordingly, a paper dispensing device (10) comprises a support (11), a rotatable spigot (12) having a first end (14) and a second end (15) and extending from the support (11) and a paper roll (13), having a bore (17) extending from a first end (18) to a second end (19), to be located when in use on the spigot (12), wherein the spigot and the bore are shaped such that the paper roll can only be fully loaded on to the spigot from the second end to the first end of the paper roll. <IMAGE>
