Abstract (en)

[origin: FR2771805A1] The invention concerns a pyro-acoustic device for protecting submarines and surface ships, characterised in that it comprises: a structure (240) for forming a controlled underwater positioning device; and a housing (100) linked with the positioning structure, said housing (100) containing: a plurality of payloads (110) each for generating an acoustic effect; and control means (125, 126; 140; 121) for initiating, according to a controlled sequence, said plurality of payloads (110).
