Abstract (en)

[origin: DE19750404A1] The invention relates to a flat chamber for filling with fluid media. Said flat chamber is defined by two essentially parallel delimiting plates and a peripheral bead of a dense, hardened adhesive which is located between the two plates and which sticks them together. At least one capillary is provided, said capillary running parallel to the plates, passing through the bead of adhesive and being stuck to said bead of adhesive.
