Abstract (en)
[origin: FR2771538A1] The display panel has an external enclosure (2) which has a transparent wall (3). The enclosure houses a continuous sheet (4) which carries a number of messages. The sheet is wound on two rollers (11,12) and runs over guide rollers (13) in the corners of the enclosure. A drive mechanism operates on the two principal rollers to position the sheet so that the selected message is displayed.
