Abstract (en)  
A sports shoe, such as a ski boot, of the type that includes a soft innerboot (8) and a rigid quarter (4) articulated to a rigid shell (2), a fastening means being associated with the shell and the quarter. A three-dimensionally shaped waterproof and elastic soft overshoe (9) is externally associated with the soft innerboot. The overshoe has a semirigid insole and has one or more regions in contact with the outside. The overshoe can be removed from the shoe in order to walk. It is thus possible to provide, for example, a ski boot in which the shell and the quarter have large cutouts preventing water from entering the soft innerboot and at the same time allowing the use of the overshoe alone for walking. <IMAGE>
