Abstract (en)

[origin: EP1035056A2] The process for winding a paper or cardboard web (12) comprises feeding it over a carrier roller and forming a nip (22) between this and a drum (20). When the drum is full, the web is cut by a non-contact cutting device (24), e.g. a jet of water or air or a laser. A separating device (26) then separates the web into two and the web is transferred to a new drum. An Independent claim is included for a winding machine for carrying out the process.
