Abstract (en)
[origin: EP1035068A2] The opening has a guide channel(5) for the cable and passes through the housing and at the end facing away from the winch is widened out to form an entry cone(6). The wall of the cone is curved inwards and has different radii(r1,r2) of curvature which are reduced in the direction of the cone opening(23). A tangent(22) of the wall curvature in the edge region of the opening lies at an angle(alpha) of 30-90 degrees to the longitudinal centre axis(21) of the guide channel.
